Relevant Work History

Upright Labs

The industry-leading, multi-channel inventory management and e-commerce software for web and mobile platforms supporting thrift/secondhand retailers.

Product Owner

2026-present

Remote

- Defined and prioritized the e-commerce product roadmap, balancing customer goals, business objectives, technical improvements, and strategic initiatives.
- Identified customer needs through product research, evaluated opportunities, led project shaping, and translated business needs into clear requirements, scope, and acceptance criteria.
- Aligned engineering, design, customer experience, and leadership on product priorities, decisions, dependencies, and delivery expectations.
- Led UX strategy and design execution, ensuring cohesive, usable experiences across e-commerce products, while supporting and mentoring designers.
- Created a release management process and implemented an automated, cross-functional system, leveraging AI workflows for internal release notes, material distribution to Customer Support and Product Marketing triggered by QA completion, and feedback loops with clear go/no-go signals to engineers for feature launches and deployments.

Senior Product Designer

2022-2026

Remote

- Initiated design thinking practices as the first design hire and led foundational efforts for customer research, user feedback, problem framing, design documentation, and collaborative problem solving.

- Cultivated a customer-focused, high-capacity design team and led the team of two product designers in supporting seventeen unique product areas.
- Led long-term strategic product planning; drove product vision and alignment to business goals; and worked cross-functionally to prioritize roadmap initiatives and align teams on product direction.
- Elevated critical user workflows in both web and mobile products with improvements to information architecture, simplified tasks, and set clear expectations which reduced cognitive load and increased task efficiency and velocity.
- Created standardized approaches to customer research, problem framing, and shaping new opportunities which accelerated project prioritization, discovery/exploration phases and played a key role in alignment and scoping discussions with stakeholders and engineers.

Movable Ink

Business-to-business marketing software that enables companies to harness data and generate hyper-personalized messages for their consumers while boosting production efficiencies.

Product Designer - Content Team

2017-2022

New York, NY and Remote

- Led the strategy, planning, and facilitation of research to gain user insight at key phases throughout product strategy, design, and development cycles.
- Impacted product strategy through design-led research, surfacing opportunities and sharing through stakeholder synthesis communications, contributing to team roadmaps, and creating a strategic vision for the content generation tool and feature set.
- Holistically approached product design by collaborating cross-functionally with product designers and product managers across feature teams to align on product strategy, user goals, and business objectives.
- Contributed to the design system through the documentation of human interface guidelines, identifying edge cases and recommended changes for new components to the system, and designed user interfaces while aligned with adopted Tailwind components.
- Evolved the product design role while collaborating extremely close with both engineers and the product manager within my feature team to shape direction options, weigh trade-offs, and define solutions against problem statements and objectives – together as a team.

UX Designer - Prospect Journey

2016-2017

New York, NY

- Facilitated first-of-its-kind sales strategic research efforts to improve the experience of prospective clients in their journey from learning about Movable Ink through becoming clients.
- Developed storytelling strategies aligned with cross-functional stakeholders in sales, marketing, design, and client experience to increase clarity for prospects and new clients.
- Designed low fidelity through high fidelity prototypes and facilitated user testing sessions to validate early-stage hypotheses and later-stage usability of an interactive, use case illustration tool.
